

HERBAGREEN®

*December 10, 2010: Visit of rice fields in Lamlukka area with a prospective distributor for Buriram/Surin. This field had been sprayed with **HERBAGREEN®** only once. About 10 days before harvest it shows strong straight plants with heavy pinnacles indicating a great harvest.*

HERBAGREEN®

Below paddy field was sprayed only once and is now 60 days old. The plants are strong and standing upright. There are no signs of worms or the brown planthopper.

*The right field sprayed only once with **HERBAGREEN®** is to be harvested in about 10 days.*

HERBAGREEN®

A typical result of using
HERBAGREEN®
in rice farming are
healthy and strong plants,
developing more pinnacles
with clean and heavy
rice kernels.

HERBAGREEN®

In this paddy field a different strain of rice was grown. The field had been attacked by rats which destroyed certain areas.

They must have pulled the plants down and eaten the rice kernels.

HERBAGREEN®

The attacked areas can be seen as smaller and more greenish in colour.

*These areas were sprayed again with **HERBAGREEN®** and recovered.*
